Morten Sorensen
MCU Coatings
Bergheimveien 17
1367 Snaroya
Norway

Dear Morten,

I would like to thank MCU Coatings for the excellent support they have provided KBR projects worldwide. We have been specifying and using MCU Coatings materials since 1997; for projects from Canada to the US Gulf Coast, South America to Asia. All of the applications in which MCU Coatings were used were executed with extremely good results.

The excellent service and support our subcontractors received from MCU Coatings is a tribute to the professional people that they have. We will continue to specify and use MCU moisture coatings because they truly:

- Increase shop productivity in a wide range of conditions
- Minimizes coating damage during handling and shipping
- Cures hard overnight so items may be shipped the next day.
- Reduces shop coating problems
- Minimizes field repairs

The only comments we hear back from fabrication-shops where that have applied coatings is that they want to use it for more applications. I don't know of any other moisture cure urethane coatings that can be applied as easily as the MCU Coatings materials. It's use could certainly be increased, only the limited availability world-wide restricts that.

Regards,

Richard Rood, P.E.
